Course syllabus for  
**Hearing Assessment 2, 9 credits**  
Hörselutredning 2, 9 hp  

This course syllabus is valid from autumn 2018.  
Please note that the course syllabus is available in the following versions:  
Autumn2017, Autumn2018, Autumn2019

### Specific entry requirements

For admission to the course, it is required that the student has managed at least 45 HE credits from Semester 1-2 and a Pass grade in Part 1 and 2 from the course Hearing assessment 1.  
Students who fail the clinical training (VIL) / equivalent as a result of demonstrating such a serious lack of knowledge, skills or attitudes that patient safety or patient confidence in healthcare is at risk, is qualified to a new opportunity only when the action plan has been established and completed.

### Objectives

The course builds further on the course Hearing assessment 1.  
The general aims of the course are that the student should be very familiar with varioustone- and speech audiometric measurements as well as impedance and electrophysiological measurement. Furthermore, the students should acquire knowledge and skills in in-depth hearing assessment and hearing-assessment planning, interpretation of measurement results and practical knowledge through clinical placement. The course constitutes a basis for future courses in hearing rehabilitation.

The expected learning outcomes of the course  
On completion of the course, the student should be able to:

- document, compare, interpret and explain results from various tone- and speech audiometric measurements  
- document, compare, interpret and explain results from impedance and electrophysiological measurements  
- identify how different sources of errors can influence the measurement results
• review the measurements critically in relation to the tone audiogram and different hearing disorders
• suggest a test battery for different audiology diagnoses and justify their choices
• give adequate patient instructions for and carry out various tone- and speech audiometry, otoacoustic emissions, impedance and brain-stem audiometry

Content

The course consists of two modules:

**Hearing assessment, 6.0 hp**

Grading scale : GU

The module introduces further tone- and speech audiometry measurements as well as impedance and electrophysiological measurements. Measurement accuracy is reviewed from concepts such as reliability and validity. The module also focuses on planning and selecting testing methods with a differential diagnosing purpose. Selection of adequate test battery from medical history, ear status and tone audiograms and interpretation of the measurement results are treated. Problem-solving and critical review are trained from patient cases and measurement results. The module also contains aspects such as communication and patient approach in the hearing health care. A strong emphasis is placed on the theoretical understanding of different methods of measurement as well as practical performance.

**Clinical placement, 3.0 hp**

Grading scale : GU

The module focuses on practical training in tone- and speech audiometry measurements as well as impedance and electrophysiological measurement. Interpretation of measurement results and critical review is covered. Otoscopy and training in taking medical history and giving information and instructions to the patient, is included in preparation for all measurements.

Teaching methods

Lectures, seminars, laboratory sessions and clinical placement.

Seminars, laboratory sessions and clinical placement are compulsory. Before laboratory session may be carried out, respective self tests should be passed. In case of absence from a compulsory part, the student is responsible for contacting the course coordinator for complementary assignment.

The course coordinator decides how absence from compulsory course elements can be made up. Study results cannot be reported until the student has participated in compulsory course elements or compensated for any absence in accordance with instructions from the course coordinator. Absence from a compulsory course element could mean that the student can not retake the element until the next time the course is offered.

Examination
Hearing assessment, 6 credits
Written examination
Group assignment with subsequent seminar
Active participation in compulsory parts

Clinical placement 3 credits
Clinical placement

For a Pass grade in the course, attendance and active participation in compulsory parts are also required. Students who do not pass a regular examination are entitled to re-sit the examination on five more occasions. Each time the course is offered, one regular examination and two additional examinations are given. Each occasion the student participates in the same test counts as an examination. Supplementary additions to written assignment is counted as an examination. Submission of a blank exam paper is regarded as an In case a student is registered for an examination but does not attend, this is not regarded as an examination.
If the student fails on current parts an one clinical education opportunity is used up For students who has failed the clinical education is are offered yet another period of placement, i.e. total two clinical education periods. The examiner may, with immediate effect, interrupt a student's clinical placement if the student demonstrates such serious deficiencies in knowledge, skills or attitude that patient safety or patient confidence in healthcare is at risk. If a clinical placement is interrupted in this way the student is deemed to have failed that element and to have used up one clinical placement opportunity. In such cases, an individual action plan should be set up stating which activities and tests are required before the student is qualified for a new clinical placement on the course.
A student who fails the clinical placement is offered yet another period of placement, i.e. a total of two clinical placement periods.

Transitional provisions

Examination may take place under the previous reading list during a period of one year after the renewal of the reading list. Examination will be provided during a period of two years after a close-down of the course.

Other directives

A course evaluation will be carried out according to the guidelines that are established by the Board of education. The course evaluation is carried out both through a written course evaluation at the end of the course and through oral course forum, at least once, in connection with course, where students can state their opinions.
