

Course syllabus for

Society and Health, 4.5 credits

Samhälle och hälsa, 4.5 hp

This course syllabus is valid from autumn 2016.

Please note that the course syllabus is available in the following versions:

[Autumn2015](#) , [Autumn2016](#) , [Autumn2017](#) , [Autumn2020](#) , [Autumn2021](#) , [Autumn2022](#) , [Autumn2023](#) , [Autumn2024](#)

Course code	2PS035
Course name	Society and Health
Credits	4.5 credits
Form of Education	Higher Education, study regulation 2007
Main field of study	Not applicable
Level	GX - First cycle
Grading scale	Fail (U), pass (G) or pass with distinction (VG)
Department	Department of Neurobiology, Care Sciences and Society
Decided by	Programme Committee 8
Decision date	2014-11-07
Revised by	Education committee CNS
Last revision	2016-04-28
Course syllabus valid from	Autumn 2016

Specific entry requirements

Passed results of the Study Programme in Psychology semesters 1-3 including 90 credits and at least 15 credits from semester 4.

Objectives

On completion of the course, the student should be able to:

- define and account for concepts and theories central for the fields social stratification, socio-economic position, society and health
- account for and evaluate social and behavioural factors that are important for health and mortality at population level
- explain and discuss some of the central mechanisms that contribute to creating inequalities in health over the life course
- evaluate scientific studies about health and health inequality

Content

The course intends to give the students in-depth knowledge of concepts, methods and empirical research about the relationship between society and health at population level. Sociological and social theories e.g. about social structures and social stratification are discussed in relation to how differences in health arise, remain and are recreated over time. Health inequalities will be highlighted based on socially and biologically defined groups in society. The student will learn basic facts concerning public health and inequality in health and gets an overview of important mechanisms that contribute to the relationships between social structures and individual health outcomes. There is also an overview of epidemiological concepts that are common scientific literature. The intention is to give the student a basis for a critical attitude when reading epidemiological research literature.

Teaching methods

Teaching is conducted through lectures by invited researchers. The contents of the course are discussed at two compulsory seminars. Compulsory assignments are part of the seminars, according to the schedule and course information. During the course, the student writes a diary/reflection. In the text, the students are expected to reflect on how the course contents will benefit them in their role as psychologists.

The course coordinator decides whether, and if so how, absence from compulsory course elements can be made up. Study results cannot be reported until the student has participated in compulsory course elements or compensated for any absence in accordance with instructions from the course coordinator. Absence from a compulsory course element could mean that the student can not retake the element until the next time the course is offered.

Examination

The examination of the course consists of an individual written course assignment, one written group assignment, an oral presentation of one of the group assignments and oral critical review/ comments of another student's individual course assignment.

To pass the course, the requirement is to pass the course assignments and comment/review another student's individual course assignment. To pass the course with distinction, it is required to pass the individual course assignment with distinction, in addition to the requirements for Pass.

Student who has not passed the course after regular examination has the right to participate at further five examinations (these can however be the following regular examinations in the course). If the student has failed six examinations/tests, no additional examination is given. Each occasion the student participates in the same test counts as an examination. Submission of a blank exam paper is regarded as an examination. In case a student is registered for an examination but does not attend, this is not regarded as an examination.

Transitional provisions

The transition rules follow KI's local guidelines for examination.

Other directives

Course evaluation based on the expected learning outcomes of the syllabus takes place in accordance with KI's local guidelines. Students are informed of the results and any measures taken on the course website.

This course can not be counted towards a degree together with another passed course whose contents completely or partly corresponds with the contents of this course. The following course is (partly) overlapping: *2PS027, Society and Health, 6 credits.*
