Course syllabus for

Public Health Response in Disasters, 20 credits

Hälsoinsatser vid katastrofer, 20 hp

This course syllabus is valid from autumn 2022.

Please note that the course syllabus is available in the following versions:

[Autumn2013](#) , [Autumn2015](#) , [Autumn2017](#) , [Spring2018](#) , [Spring2020](#) , [Spring2021](#) , [Spring2022](#) , [Autumn2022](#)

Course code	2QA236
Course name	Public Health Response in Disasters
Credits	20 credits
Form of Education	Higher Education, study regulation 2007
Main field of study	Public Health in Disasters
Level	Second cycle, has only first-cycle course/s as entry requirements
Grading scale	Fail (F), fail (Fx), sufficient (E), satisfactory (D), good (C), very good (B) or excellent (A)
Department	Department of Global Public Health
Decided by	Styrelsen för utbildning
Decision date	2014-06-23
Revised by	Education Committee GPH
Last revision	2021-12-16
Course syllabus valid from	Autumn 2022

Specific entry requirements

A professional degree of at least 120 credits in health care or medicine. In addition to this, two years of work experience within one of the above-mentioned professions is required (certified by the employer). Alternatively, a degree of at least 180 credits and for the field relevant work experience (such as humanitarian aid and international development organisations, certified by the employer/organisation). And proficiency in English equivalent to English B/English 6.

Objectives

The aims of the course are to provide competencies, to adequately prioritize, plan, implement and monitor public health interventions in disaster relief, based on needs and risks.

Module 1

On completion of the course, the student should be able to:

Knowledge and understanding

- explain how different health determinants influence vulnerability and a society's ability to cope with disasters.
- define various types of disasters and describe how they can be prevented, as well as how their negative influence on the public health and health systems can be mitigated.

Skills and abilities

- in a multistage process explain and plan how data and information about health risks and health needs can be sought, analysed and assessed in disasters.

Judgement and approach

- evaluate how various types of disasters influence public health.

Module 2

On completion of the course, the student should be able to:

Knowledge and understanding

- describe the role of health systems in disasters
- describe essential health interventions in different types of disasters
- explain principles of and handling of mass-casualty situations
- explain the principles of evaluation health systems and of health actions at disaster actions.

Skills and abilities

- plan for essential health interventions in different types of disasters
- plan for epidemiological surveillance in disasters situations.

Judgement and approach

- relate to disaster response systems, their potentials and weaknesses.
- prioritize among different strategies intended to meet the essential public health needs in disasters.
- argue for the most important components for control of infectious diseases.

Content

The course is divided in two modules:

Pre-disaster and disaster situations - global perspective, 8.0 hp

Grading scale: AF

The course module focuses on the global burden of disease and factors that influence variations in the health status p. The course highlights and analyses general and directed health strategies intended to improve global health. The course module also focuses on health-related needs in various types of disasters and methods for analysis and assessment of public health and health-related needs in disasters.

- Global health and the global burden of disease
- Health determinants and their variation at global, regional, national and local level
- The indirect and direct effects of disasters on health and health systems
- Assessment of public health needs in disasters

Public Health Response in Disasters, 12.0 hp

Grading scale: AF

The part of the course follows after assessments of health-related needs in a disaster. Important fields are: Priorities and organisation of health actions, epidemiological supervision and control of infectious diseases. Specific strategies for mass-casualty situations and other acute health threats are highlighted. The module is completed with methods and principles of evaluation of health actions.

- Planning and implementation of curative and preventive public health interventions in different types of disasters and contexts
- Principles for and handling of mass-casualty situations
- Epidemiological surveillance in disasters
- Control of infectious diseases
- International systems for disaster response
- Evaluation of public health response in disasters

Teaching methods

Interactive lectures. Web-based assignments in groups and individual, compulsory simulation exercises and compulsory discussion seminars. The student will practice and show ability to gather and analyse information related to disasters in the simulation exercises. The student will describe health systems and describe, plan and prioritize essential health interventions in, in the simulation exercises.

Examination

The two modules will be examined in two written examinations. Each module, also have compulsory parts, where active participation is required.

Module 1.

The examination consists of a written exam.

Module 2.

The examination consists of written exam.

The student will receive a final grade for the whole course (A-F). The final grade is an appraisal of the results in the two individual examinations. In order to pass the course, the student must obtain at least grade E in both the individual examinations and as well have met the established criteria for the obligatory parts.

Compulsory participation

The examiner assesses if, and in that case how, absence can be compensated. Before the student has participated in all compulsory parts or compensated absence in accordance with the examiner's instructions, the student's results for respective part will not be registered. Absence from a compulsory activity may result in that the student cannot compensate the absence until the next time the course is given.

Limitation of number of occasions to write the exam

Students who have not passed the regular examination are entitled to participate in five more examinations. If the student has not passed the exam after four participations, he/she is encouraged to visit the study advisor. If the student has failed six examinations/tests, no additional examination or new admission is provided.

The number of times that the student has participated in one and the same examination is regarded as an examination session.

Submission of blank exam is regarded as an examination session. An examination for which the student registered but not participated in, will not be counted as an examination.

If there are special grounds, or a need for adaptation for a student with a disability, the examiner may decide to deviate from the syllabus's regulations on the examination form, the number of examination opportunities, the possibility of supplementation or exemptions from the compulsory section/s of the course etc. Content and learning

outcomes as well as the level of expected skills, knowledge and abilities may not be changed, removed or reduced.

Transitional provisions

Examination will be provided during a time of two years after a possible cancellation of the course. Examination can take place according to an earlier literature list during a time of one year after the date when a major renewal of the literature list has been made.

Other directives

The course will be given in English.

Course evaluation will be carried out according to the guidelines that are established by the Committee for Higher Education. The course may not be included in a higher education qualification at the same time with the overview and passed course, whose contents completely or partly corresponds to the course content.
