Department	Department of Women's and Children's Health
Decided by	Programnämnd 9
Decision date	2012-09-27
Revised by	Programme Committee 9
Last revision	2016-10-21
Course syllabus valid from	Spring 2017

Specific entry requirements

Professional qualification as a nurse certified by the National Board of Health and Welfare. Alternatively, current enrollment at the Specialist Nursing Program at Karolinska Institutet.

Objectives

The general aims of the course are that the student should be able to apply and integrate knowledge in preventive and health promotion work within child health on completion of the course.

On completion of the course, the student should be able to:

Knowledge and understanding

- analyse and explain symptom and treatment at children within the child health,
- identify and analyse nursing needs at work from the child health BAS program,
- show knowledge and understanding about improvement -, development - and current research within the child health.

Skills and abilities

- show ability to notice and meet needs of learning among children family/close, and representatives for other occupational groups and activities,
- show ability to integrate the nursing process and family-oriented care in child health work by analysing assess argue too and handle complex phenomena, issues and situations also with restricted information,
- show ability to prioritise initiate, carry out investigation and follow up considering developmental stage, family situation, cultural background and gender,
- demonstrate scientific precision in analysis and written text.

Judgement and approach

- analyse and reflect around relevant scholarship and best practice, see its relationship and importance for the nurse practitioner within the child health,
- show ability, within the UN Child Convention and societal- and ethical aspects inherence of a holistic approach in child health care,
- demonstrate the ability to personal inventory relevant to professional practice, and stand up for the basic values child health services,
- show deeper understanding about laws, ordinances and national and local regulations that apply within the child health.

Content

In the course, preventive concepts based on family-focused nursing within the family and child healthcare are studied. The course deals with the rights, resources and need in different developmental stages of children and living environments with the perspectives of the child as starting point, related to scholarship and research within the child health.

Also the prevention importance in the area be studied. Theories and models for communication and teaching be processed. The course also deals with cross-professional and cross-sectoral cooperation, current laws, ordinances and safety precautions and its application. In the course is observed both a diversity perspective and ethical issues.

Teaching methods

The teaching is based on a problem-oriented and collaborative approach to learning in which the tasks provide opportunities for the student to take active responsibility for their learning. The used teaching methods are introductory lectures and student-activating teaching and working methods (individually, in groups and in seminars). The course is carried out as distance education with learning management system (PingPong) as basis.

Working in groups, active participation in seminars and attendance at all scheduled group meetings is mandatory.

The course coordinator decides whether, and if so how, absence from compulsory course elements can be made up. Study results cannot be reported until the student has participated in compulsory course elements or compensated for any absence in accordance with instructions from the course coordinator. Absence from a compulsory course element could mean that the student can not retake the element until the next time the course is offered.

Examination

The course contains part-examinations based on the Swedish Child Health Services (Bas program), parenting-support and health discussions as group activities. Two of the part-examinations has a collaborative approach with project-groups (peer learning), the third part-examinations is individual together with a peer review. The final examination is individual and based on promotive and preventive issues based on a fictitious patient case.

Students who do not pass a regular examination are entitled to re-sit the examination on five more

occasions. If the student has failed six examinations/tests, no additional examination is given. Each occasion the student participates in the same test counts as an examination. In case a student is registered for an examination but does not attend, this is not regarded as an examination.

Late submissions of examinations are not accepted. Students who have not submitted on time are referred to re-examination.

Transitional provisions

Examination will be provided during a time of two years after a possible close-down of the course. Examination can be according to an earlier literature list during a time of one year after the date when a renewal of the literature list been made.

Other directives

The course evaluation takes place according to guidelines established by the Board of Education.

Language of instruction: Swedish.
