

Course syllabus for

Research methodology, 7.5 credits

Forskningsmetodik, 7.5 hp

This course syllabus is valid from autumn 2022.

Please note that the course syllabus is available in the following versions:

[Autumn2008](#) , [Autumn2011](#) , [Autumn2015](#) , [Autumn2017](#) , [Autumn2019](#) , [Autumn2020](#) , [Autumn2022](#)

Course code	3GB001
Course name	Research methodology
Credits	7.5 credits
Form of Education	Higher Education, study regulation 2007
Main field of study	Global Health
Level	AV - Second cycle
Grading scale	Pass with distinction, Pass, Fail
Department	Department of Global Public Health
Decided by	Programnämnden för folkhälsovetenskap
Decision date	2008-09-29
Revised by	Education Committee GPH
Last revision	2022-03-09
Course syllabus valid from	Autumn 2022

Specific entry requirements

A Bachelor's degree or a professional degree equivalent to a Swedish Bachelor's degree of at least 180 credits. And proficiency in English equivalent to English B/English 6.

Objectives

After completion of the course the student should be able to:

- Describe how to design, collect and analyze data in qualitative and quantitative projects
- Use appropriate statistical methods for the analysis of different data sets, interpret and present findings from statistical analyses in a clear, concise, and logical manner
- Identify problems caused by systematic errors, bias and confounding in interpreting epidemiological data
- Describe and discuss key characteristics of qualitative data collection methods and reflect on their main advantages and challenges
- Describe key characteristics of main qualitative analysis methods including the role of the researcher in the process of analysis
- Compare qualitative and quantitative approaches and understand when these are best used singly

or in combination

Content

During the course the following will be covered:

- Study design: cross-sectional, case-control, cohort, and intervention studies and mixed-methods.
- Measures of disease frequency and risk, and associations.
- Interpretation of epidemiological and statistical concepts including causality, random errors, bias, confounding.
- Describing univariate and bivariate data: using tables and graphs; proportions; measures of central tendency (mean, median), and variability (range, standard deviation, percentiles); correlation coefficients, differences and ratios.
- Statistical inference: confidence intervals and p-values, hypotheses tests.
- Simple and multiple linear and logistic regression analysis.
- Analyses using statistical software.
- Qualitative research methods: observational method, interviews, focus group discussions, participatory methods.
- Qualitative data analysis, validity and triangulation in qualitative research.
- Measures of illness perceptions and experiences; participant accounts of everyday life.
- Describing the data collection process; sampling principles; the role of gatekeepers; the interactions between researcher and researched; the links between theory and method.

Teaching methods

Learning activities include lectures, group work and practical sessions.

Examination

The examination will consist of three parts:

- Qualitative assessment - individual written assignment
- Epidemiology assessment - individual written assignment
- Biostatistics assessment - individual written assignment

The grades used are fail, pass or pass with distinction. To obtain the final grade pass on the course, the student must be awarded at least pass on all three examination components. To obtain the grade pass with distinction the student must be awarded pass with distinction on all components.

Compulsory participation

The examiner assesses if and, in that case, how absence can be compensated. Before the student has participated in all compulsory parts or compensated absence in accordance with the examiner's instructions, the student's results for respective part will not be registered.

Limitation of number of occasions to write the exam

Students who have not passed the regular examination are entitled to participate in five more examinations. If the student has not passed the exam after four participations he/she is encouraged to visit the study advisor. If the student has failed six examinations/tests, no additional examination or new admission is provided.

The number of times that the student has participated in one and the same examination is regarded as an examination session. Submission of a blank examination is regarded as an examination. An examination for which the student registered but not participated in will not be counted as an examination.

If there are special grounds, or a need for adaptation for a student with a disability, the examiner may decide to deviate from the syllabus's regulations on the examination form, the number of examination

opportunities, the possibility of supplementation or exemptions from the compulsory section/s of the course etc. Content and learning outcomes as well as the level of expected skills, knowledge and abilities may not be changed, removed or reduced.

Transitional provisions

Examination will be provided during a time of two years after a possible cancellation of the course. Examination can take place according to an earlier literature list during a time of one year after the date when a major renewal of the literature list has been made.

Other directives

Course evaluation will be carried out in accordance with the guidelines established by the Committee for Higher Education.

The course language is English.
