Institutet**

Course syllabus for

Basic medical science, 7.5 credits

Grundläggande medicinsk vetenskap, 7.5 hp

This course syllabus is valid from autumn 2015.

Please note that the course syllabus is available in the following versions:

Autumn2012 , Autumn2015

Course code	5HI002
Course name	Basic medical science
Credits	7.5 credits
Form of Education	Higher Education, study regulation 2007
Main field of study	Not applicable
Level	GX - First cycle
Grading scale	Excellent, Very good, Good, Satisfactory, Sufficient, Fail, Fail
Department	Department of Clinical Neuroscience
Decided by	Programnämnd 5
Decision date	2012-03-29
Revised by	Programme Committee 5
Last revision	2015-03-20
Course syllabus valid from	Autumn 2015

Specific entry requirements

A Bachelor's degree or a professional degree equivalent to a Swedish Bachelor's degree of at least 180 credits in health care, biomedicine, medical technology, computer and systems sciences, informatics or the equivalent. Knowledge of the English language equivalent to English B at Swedish upper secondary school.

Objectives

On completion of the course, the student should at a general level be able to describe:

- The structure and function of the cell and tissues
- The organ systems of the body and their function
- Common diseases

Content

- The structure and function of the cell
- The different tissues of the body

- The nervous system structure and function and diseases that may affect the nervous system and treatment of these
- The structure and function of the senses
- The structure and function of the circulation apparatus, and diseases that may affect this organ systems and their treatment
- The structure and function of the respiration system and diseases that may affect the respiration paths and their treatment
- The structure and function of the gastrointestinal canal and diseases that may affect the gastrointestinal canal, and their treatment
- The hormone systems structure and function and disorders that may affect this system and treatment of these
- The structure and function of the immune system, and infection and immunological diseases
- The structure and function of the reproductive organs

Teaching methods

The teaching is given partly in the form of lectures where the students are encouraged to active participation and partly in the form of group assignments. The students will also get study questions that they should work independently with. There is also scheduled time when students may discuss these questions with teachers.

Examination

One written examination.

Compulsory participation

Two mandatory group exercises based on the study questions. The course director assesses if and, in that case, how absence can be compensated. Before the student has participated in all compulsory parts or compensated absence in accordance with the course director's instructions, the student's results for the course will not be registered in LADOK.

Limitation of number of occasions to write the exam

The student has the right to write the exam six times. If the student has not passed the exam after four participations he/she is encouraged to visit the study advisor.

The number of times that the student has participated in one and the same examination is regarded as an examination session. Submission of a blank examination is regarded as an examination. An examination for which the student registered but not participated in will not be counted as an examination.

Transitional provisions

Examination will be provided during a time of two years after a possible cancellation of the course.

Examination can take place according to an earlier literature list during a time of one year after the date when a major renewal of the literature list has been made.

Other directives

Course evaluation will be carried out in accordance with the guidelines established by the Board of Higher Education.

The course is given in English.
