Institutet**

Course syllabus for

Projects in health informatics - from idea to specification, 5 credits

Projekt inom hälsoinformatik - från idé till specifikation, 5 hp

This course has been cancelled, for further information see Transitional provisions in the last version of the syllabus.

Please note that the course syllabus is available in the following versions:

Spring2013 , Autumn2015 , Spring2017

Course code	5HI009
Course name	Projects in health informatics - from idea to specification
Credits	5 credits
Form of Education	Higher Education, study regulation 2007
Main field of study	Health Informatics
Level	AV - Second cycle
Grading scale	Excellent, Very good, Good, Satisfactory, Sufficient, Fail, Fail
Department	Department of Learning, Informatics, Management and Ethics
Decided by	Programnämnd 5
Decision date	2012-10-29
Revised by	Programme Committee 5
Last revision	2015-03-20
Course syllabus valid from	Autumn 2015

Specific entry requirements

Bachelor of science or professional qualification of at least 180 credits within health care, biomedicine, technology, data and software engineering or informatics. Furthermore, knowledge in English equivalent to English B (with at least the Pass grade) is required.

Objectives

On completion of the course, the students should be able to:

Knowledge and understanding

- explain how to run a project in an interactive process.

Skills and ability

- work effectively in interdisciplinary, multidisciplinary and international teams.
- independently and creatively initiate, lead and manage a health informatics (HI) development project in its first stages.
- apply the theories to a real project in health care.
- through models and charts/diagrams describe the user requirements and business processes before and after the possible introduction of HI-systems.
- compile and present a specification with the surrounding documentation and demonstrate a paper prototype of an IT-based support in health.

Assessment ability and attitudes

- explain, take a standpoint and critically select the non-functional requirements that the proposed solution should hold and evaluate, justify and argue for and against selections.

Content

A main idea is to link together all courses from the gone year and allow the students to exercise/practise the skills and thus develop their potential for professional activities.

The course is based on a real problem that is identified for example through earlier case studies or from the students' own earlier experiences. The students initiate a development project that should be solved according to the following procedure: Start from an idea - define a problem - carry out a pilot study (gather user requirements/describe the business processes) - suggest a solution - test a prototype - complete a specification in a standardised way.

Teaching methods

Working groups of 6-8 students work independently under supervision. The groups will consist of students who have different background (technology/healthcare) and take different positions in the (group)organisation.

- Students who have technical background should be able to define, describe and discuss problems, explain, discuss and decide the technical aspects of the project such as choice of architecture, choices of development method and choices of notation ways.

- Students who have background in healthcare should be able to define, describe, discuss problems, explain, discuss and consider aspects such as specific requirements related to specific medical conditions, specific requirements related to health care organisations and legal/ethical aspects.

The students present their results in continuing formative seminars. The course is completed with a demonstration of a paper prototype.

Examination

The examination is based on three different parts:

- Project Management (A-F) - written assignment.
- Specification (A-F) - written assignment.
- Presentation (Fail/Pass) - oral presentation.

To pass the course you must pass all parts. The final grade for the course becomes the mean/average

Compulsary participation

Participation in the seminars and group activities is compulsory. The course director assesses if and, in that case, how absence can be compensated. Before the student has supplement in accordance with the course director's instructions, the student's grades for the course will not be registered. The absence of a mandatory activity could mean that the student can not make up for this until the next time the course is offered.

Limitation of number of occasions to write the exam

The student has the right to write the exam six times. If the student has not passed the exam after four participations

he/she is encouraged to visit the study counsellor.

Transitional provisions

Examination will be provided during a time of two years after a possible cancellation of the course.

Examination can take

place according to an earlier literature list during a time of one year after the date when a major renewal of the literature

list has been made.

Other directives

Course evaluation will be carried out in accordance with the guidelines established by the Board of Education.

The course is given in English.

Literature and other teaching aids

No specific literature
